

CASE STUDY - ECB® MEMBRANE

DAVE'S PERSONAL SHOP

Project: Dave's Personal Shop

In his 2,600 SqFt shop, Dave wanted the tile pattern in the floor to be one color under the cars with the same color in the middle walk path. The concrete company cut expansion joints in the slab every 10 feet. He did not want to see expansion joints every 10 feet and mess up the nice pattern. He was also concerned about the weight of the lift and heavy farm tractors and how that would compress and impact the floor. Dave chose ECB membrane on Paul Mudd's recommendation. It is rated "Extra Heavy Duty," eliminating the point load concerns, while allowing for the expansion joints to be located between the garage doors, giving him a clean slate to lay the floor out like he wanted.

General Contractor: **Keith McKee**
Membrane Mfg: **NAC Products, Inc** - NAC TAC Primer, ECB Crack Isolation Membrane
Tile Manufacturer: **Fiandre** - Porcelain Tile
Accessory Products: **Bostik** - Big Tile & Stone Mortar, Tru Color Urethane Grout
Tile Distributor: **Unique Tile, Nixa, MO**
